Introduction

Each year, Common App releases an ongoing series of “Deadline Update” research briefs to share detailed and timely insights about the state of first-year college applications and year-over-year trends through a specific point in the application season — in this case, December 1. We time these briefs to capture activity for major college application deadlines on the first of each month from November to March.

By analyzing and disseminating up-to-date application activity, we bring attention to developing trends in applicant race/ethnicity, socioeconomic status, geographic residence, early decision applications, and the types of institutions to which students apply. We hope to empower enrollment leaders, counselors, and other stakeholders with these data insights as we strive, together, to increase the accessibility of the college admissions process in alignment with our [Next Chapter](#).

Note: As Common App membership has consistently grown over time, we focus deadline updates on institutions that have maintained Common App membership for the five most recent years (“returning members”), or 863 institutions. That said, trends observed here may still partially result from new members bringing new applicants onto the platform each year.

Dec 1
deadline

5,393,569
applications

1,101,927
applicants

863
returning members*

*institutions who have maintained membership since 2020

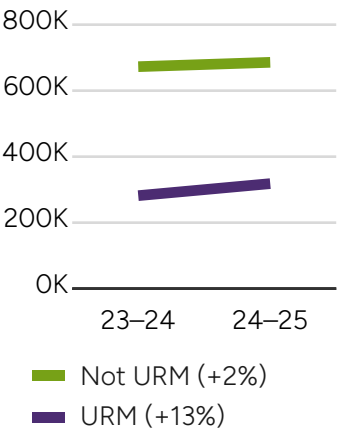

Member type

Applications to public members (11%) grew more than those to private members since 2023–24 (5%)

Underrepresented minority applicants

Underrepresented minority race/ethnicity (URM) increased by 13%

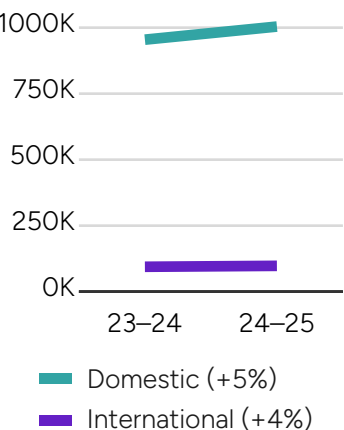

Below-median income

Growth in applicants from below median income ZIP-codes continued to outpace their peers at 9% since 2023–24 (versus 4%)

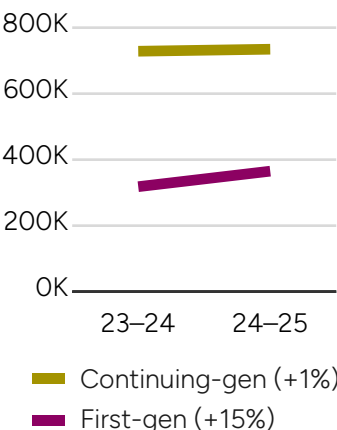

International applicants

International applicant growth trails growth in domestic applicants since 2023–24

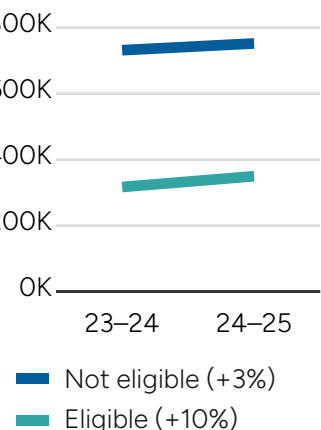

First-generation status

First-generation (“first-gen”) applicants increased by 15% since 2023–24

Fee waiver eligibility

Students reporting eligibility for a Common App fee waiver increased at over three times the rate of students not reporting fee waiver eligibility (10% vs. 3%)

[Trends in test score reporting](#)

[Trends by member characteristics](#)

[Appendix](#)

Key findings

1. **Applicant and application counts are up:** Through December 1, 2024, 1,101,927 distinct first-year applicants had applied to 863 returning members, an increase of 5% from 1,048,873 in 2023–24.
 - a. Total application volume to returning members through December 1 rose 8% from 2023–24 (4,982,119) to 2024–25 (5,393,569). Applicants were also applying to slightly more members in 2024–25 than in 2023–24 (up 3% from 4.75 to 4.89 applications per applicant).
2. **Latinx and Black or African American applicants are among the fastest growing:** Applicants identifying as an underrepresented minority race/ethnicity¹ (URM) increased by 13% in 2024–25, with fastest growth for applicants identifying as Latinx (14%) and Black or African American (12%). We provide breakouts by student detailed race/ethnicity backgrounds, as well.
3. **First-generation applicants are substantially up:** Applicants identifying as first-generation grew at a substantial rate of 15%, while continuing-gen applicants grew by 1% from 2023–24 to 2024–25.
4. **Low-income applicants are up:** Growth was also faster for students reporting eligibility for a Common App fee waiver, which increased at over three times the rate of students not reporting fee waiver eligibility (10% vs. 3%). This is also true of growth in applicants from below-median income ZIP codes, who continued to outpace their above-median income peers at 9% since 2023–24 (versus 4%).
5. **Domestic growth in applicants was fastest in the Southwest and among metropolitan and micropolitan urbanicity:** The Southwestern region experienced the fastest growth (32%). Growth in applicants was roughly equal across metropolitan, micropolitan, and small town urbanicity types (ranging from 4% to 6%). We observed no growth in Rural areas. Texas (35%) and West Virginia (26%) were the fastest growing states since 2023–24 and applicants from the District of Columbia grew 24%.
6. **Rate of domestic applicant growth exceeds growth in international applicants for the first time since 2019:** Growth in the number of

¹We use the term underrepresented minority (URM) in alignment with conventions employed by the [National Science Foundation](#). In this report, applicants identifying as Black or African American, Latinx, American Indian or Alaska Native, or Native Hawaiian or Other Pacific Islander are classified as URM applicants.

international applicants (applicants who report exclusive, active citizenship for a country outside the U.S.) slightly trailed growth in domestic applicants at 4% since 2023–24 (versus 5% for domestic applicants). Growth is fastest among applicants with citizenship in Bangladesh (50%), Mongolia (48%), and Myanmar (38%). Additionally, the rapid growth in applicants from Africa since at least 2020–21 exhibited a downturn this season (-12% over the past year), while applicants from China are up (7% over the past year)

7. **Approximately half of applicants have reported test scores by this point in the season:** Year-over-year growth in the number of applicants reporting test scores by this point in the season greatly outpaced (9% to 1%) those not reporting test scores for the first time since the 2021–22 season, closing the gap between reporters and non-reporters. As of December 1st, 555,691 applicants have reported test scores and 546,236 have not. This is despite only a nominal change in the share of members with a test score requirement this season (up from 4% in 2023–24 to 5% this season).
8. **Applications to public members (11%) grew at a faster rate than those to private members since 2023–24 (5%).** Furthermore, growth in applications was slowest for the most selective institutions (defined as having admit rates below 25%) at 5% and uniformly higher for all other selectivity levels at between 8–11%.

Overall platform trends

Beginning our review of season-to-date data with overall platform usage trends, Figures 1–4 display the overall number of accounts created by students intending to enroll in the following academic year (e.g., 2025–26 for students in the 2024–25 application season), the number of account creators that have submitted at least one application at this point in the season (“applicants”), the total number of applications submitted, and the average number of applications submitted per applicant. Each point in each plot tracks the indicated metric for one season through December 1, and the final season in each plot is additionally labeled with the percent growth in that metric between 2023–24 and the current season.

For example, in Figure 1, we see that the number of account creators through December 1 has grown from 2,048,833 in 2023–24 to 2,135,935 in 2024–25 – an increase of 4%. In general, we see that there is consistent and considerable growth in platform use by this point in the season, with a 5% increase in applicants, a 8% increase in applications, and a 3% increase in applications per applicant.

Figure 1. Growth in first-year accounts created by students intending to enroll in the following academic year since 2020–21

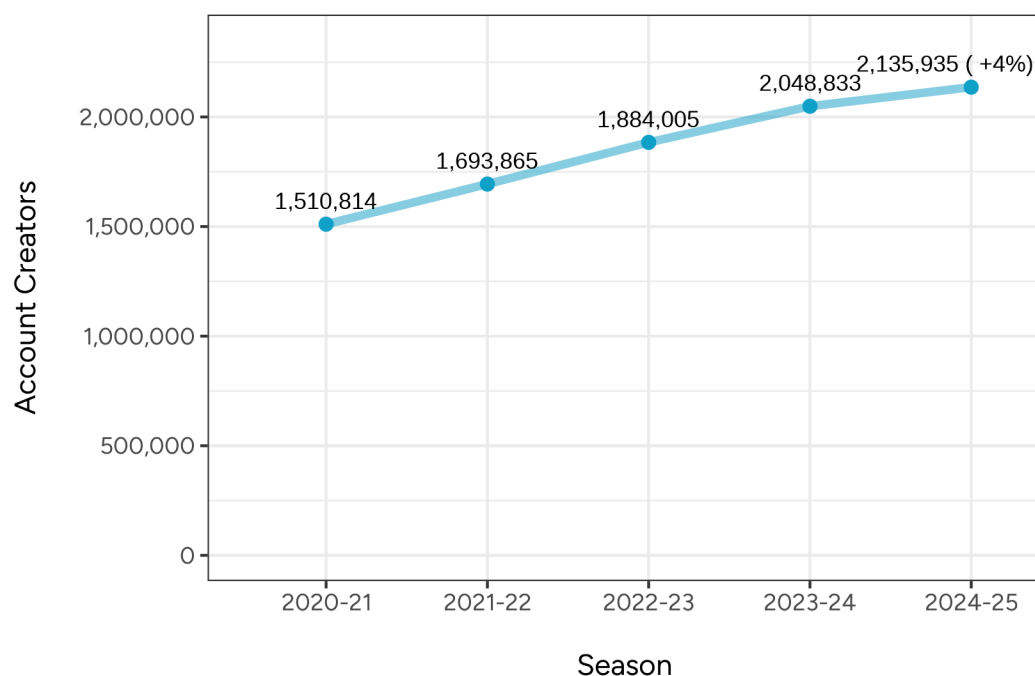

Figure 2. Growth in first-year applicants since 2020–21**Figure 3. Growth in first-year applications since 2020–21**

Deadline update, 2024–2025: First-year application trends through December 1
December 9, 2024

Figure 4. Growth in first-year applications per applicant since 2020–21

Applicant demographic trends

Though the trends above reveal broad growth in the use of Common App over time, the primary value in these timely updates lies in disaggregating these trends by student demographics and other key application characteristics.

Trends by student legal sex

Figure 5 displays growth in applicants by legal sex since 2020–21. Students self-identify their sex as male, female, or X (added in 2023–2024). Female applicants accounted for a larger share of all applicants throughout the period, and female and male applicants shared a growth rate of 5% since 2023–2024. Students identifying as X grew 25%, from 531 to 666, between 2023–24 and 2024–25.

Figure 5. Growth in domestic first-year applicants by sex since 2020–21

Figure 6. Growth in domestic first-year applicants by underrepresented minority status since 2020–21

Trends by student race/ethnicity

Given member interest in the continuing repercussions of the [United States Supreme Court decision on race-conscious admissions](#), we begin our deeper dive

Deadline update, 2024–2025: First-year application trends through December 1
December 9, 2024

into application trends by looking across applicant underrepresented minority status (URM) in Figure 6.² Consistent with results from our [previous reports on the diversification of the Common App applicant pool](#), we see that the number of applicants identifying as URM is growing at a pace that exceeds that of their non-URM peers at 13% since 2023–24 (versus 2%), even though the number of these students remains smaller. Put another way, the share of domestic applicants identifying as URM has increased from 29.5% in 2023–24 to 31.7% in 2024–25 (not pictured). Note that all plots shown here regarding student race/ethnicity (Figures 6–8) focus exclusively on domestic applicants (i.e., excluding citizens of countries besides the United States) in alignment with federal reporting practices in higher education.

Figure 7. Growth in domestic first-year applicants by federal race/ethnicity groupings since 2020–21

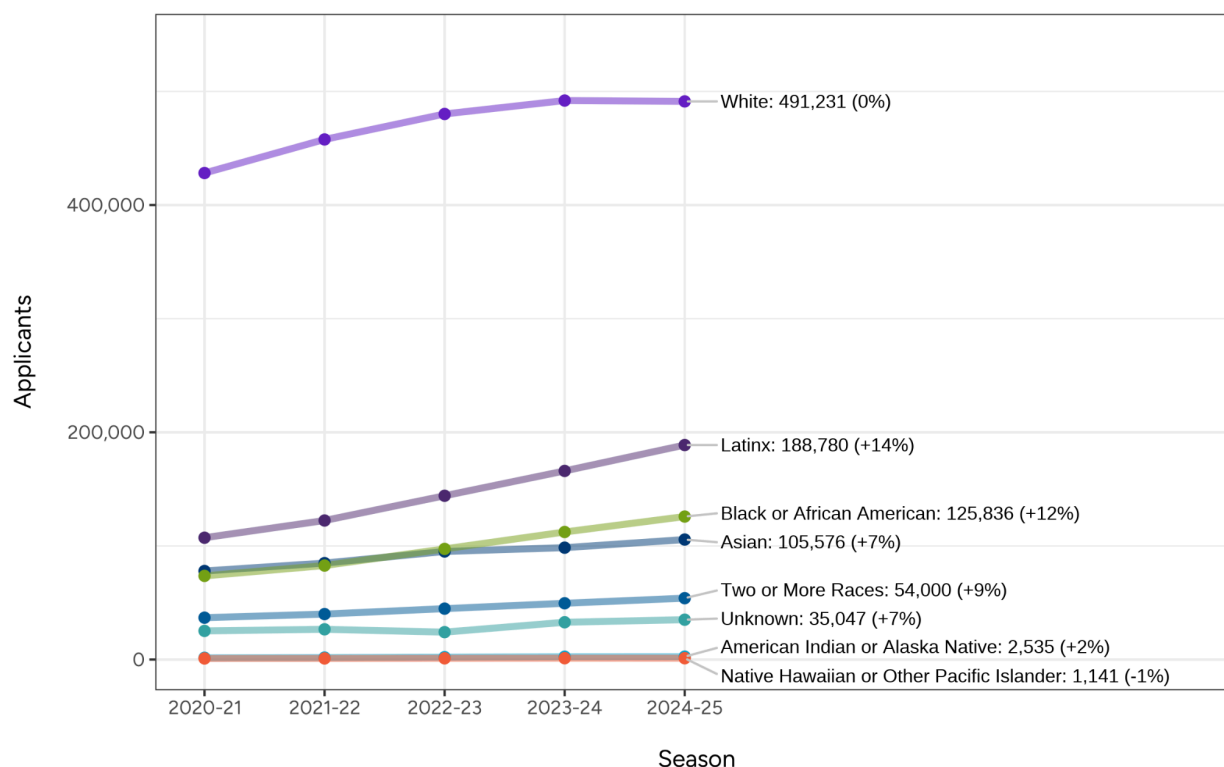

Figure 7 examines applicant growth trends across federal race/ethnicity groupings, revealing this growth among URM groups is fastest for applicants identifying as Latinx (14%), Black or African American (12%), and Asian (7%). Put another way, the share of domestic applicants identifying as Black or African American has increased

² See our discussion of Figures 22 and A14 through A22 for additional analyses related to application trends by race/ethnicity as they relate to members of varying selectivity bands.

from 11.8% in 2023–24 to 12.5% in 2024–25 (not pictured). While the majority of domestic applicants identify as White, the share of domestic applicants identifying as White has declined from 51.5% in 2023–24 to 48.9% in 2024–25, a drop that represents the continuation of a long-term trend dating back to at least the 2013–2014 season³ (when the share of applicants identifying as White as of December 1 was 67.9%).

The share of students reporting Unknown race/ethnicity increased only slightly from 2023–24, with 3.4% of students reporting Unknown in 2023–24 and 3.5% in 2024–25 (not pictured). These data together suggest that there have been no meaningful deviations from pre-existing trends over the past decade in race/ethnicity reporting or population growth after the U.S. Supreme Court ruling, aligning with our recent [research brief on the subject](#) following the end of the 2023–24 application season.

The Common Application prompts students to share more detailed background information within each federal race/ethnicity group (e.g., identifying as Asian with background in China). We are thus able to break out each of the federal race/ethnicity groupings shown above into these more detailed backgrounds. For visual clarity, we focus only on the five most prevalent detailed backgrounds within each federal race/ethnicity group (with the rest combined into an “Other” category). Figure 8 below shows, as an example, growth in first-year applicants across detailed Asian backgrounds, revealing that growth is fastest among Asian applicants identifying their background in Vietnam (13%), Multiple Backgrounds (10%), and Other (9%). Corresponding plots for each of the other federal race/ethnicity groups can be found in the Appendix (Figures A1–A5).⁴

³ This trend of White students exhibiting declines as a percentage share of the total applicant pool on the platform for the last several years relative to other racial / ethnic groups mirrors declines in relative White first-year student enrollment observed over the last several Fall enrollment periods (National Student Clearinghouse [current enrollment report](#)).

⁴ For those interested in learning more on this subject, we reported on a variety of additional trends and correlations using these detailed background data in a two-part research brief series in the 2022–23 season (Unpacking applicant race and ethnicity, [part one](#) and [part two](#)).

Figure 8. Growth in domestic first-year applicants by detailed Asian backgrounds since 2020–21

Trends by student socioeconomic status

In addition to student race/ethnicity, we can also examine multiple dimensions of student socioeconomic status. We display applicant trends by first-generation status in Figure 9. There is slowing annual growth for continuing generation students (1%), relative to the recent trend for this demographic group. In contrast, first-generation students continue to exhibit steady, strong growth at 15%. For these purposes, we define a first-generation college student as having parents who have not obtained a Bachelor's degree or higher (regardless of when the degree was received, whether the student lives with adults other than their parents, and institutional country or type).⁵

⁵ For more detail on this topic, see our three research briefs from the 2023–24 season addressing [trends](#), [definitions](#), and [complexities](#) around parental education.

Figure 9. Growth in first-year applicants by first-generation status since 2020–21

Figure 10. Growth in first-year applicants by Common App fee waiver eligibility since 2020–21

Figure 10 similarly tracks growth in applicants by self-reported Common App fee waiver eligibility, often used as a proxy for low-income status.⁶ Applicants reporting

⁶ More information on exact eligibility criteria descriptions are [available online](#).

eligibility for the Common App fee waiver have grown at over three times the rate as other applicants (10% versus 3%) through this point in the season since 2023–24.

While Common App does not explicitly collect applicants' household income information, we supplement our understanding of the socioeconomic characteristics of applicants by examining characteristics of the communities in which they reside from the U.S. Census (for students residing in the United States). In alignment with broader higher education research practices, our past research work, and our [Next Chapter](#), we track the number of applicants residing in a ZIP code with a median household income above or below the national median household income.⁷ As shown in Figure 11, applicants coming from below-median income ZIP codes increased at a faster pace than their above-median income peers at +9% since 2024–25 (vs. 4%).

Figure 11. Growth in domestic first-year applicants by ZIP code median household income relative to national median household income since 2020–21

⁷ We use the American Community Survey 5-year estimates on household income, both nationally and by ZIP Code Tabulation Areas. To account for the roughly two-year lag in data availability of ACS survey data, we use ACS data from two years prior to a given season for our calculations (e.g., we use the 2018–2022 ACS to map onto applicants in the 2024–2025 application season). We exclude students residing outside the United States, or who live in ZIP codes without a median household income estimate from the ACS.

Trends by student geography

Though Common App membership continues to expand across the country, Common App use still varies substantially by geography. For students residing in the United States, Figure 12 tracks applicant ZIP code urbanicity classifications,⁸ while Figure 13 tracks applicant state-regions. Overall growth since 2023–24 was highest among Micropolitan (6%) and Metropolitan (4%) urbanicity types, with no growth among Rural areas. Driven mainly by rapid growth in the state of Texas (35%), the growth rate of the Southwestern (32%) region far outpaced other regions.

Figure 12. Growth in domestic first-year applicants by ZIP code urbanicity since 2020–21

⁸ Per the U.S. Office of Management and Budget, a Metropolitan area is a region with an urban center containing a population of at least 50,000. A Micropolitan area is a region with an urban center containing a population of at least 10,000, but less than 50,000.

Figure 13. Growth in domestic first-year applicants by United States region since 2020–21

We also examine state-by-state growth in applicants over time. For visual clarity, Figure 14 shows applicant trends among the ten fastest-growing states since 2020–21, while Figure 15 shows applicant trends among the ten states with the most applicants overall as of 2024–25. We exclude from these visualizations any state or territory with fewer than 100 applicants in any one season. For those interested in seeing these statistics for every state, we have included an exhaustive table in the Appendix (Table B1).

Figure 14. Growth in domestic first-year applicants among the ten fastest growing states since 2020–21

Figure 15. Growth in domestic first-year applicants among the ten highest volume states as of 2024–25

Figure 16 charts applicant growth among domestic and international applicants, where international applicants have explicitly reported active citizenship in a country besides the United States. Figure 17 shows, for those international applicants, the growth in applicants by region of the world.⁹ For a more granular view at a country-by-country level, Figure 18 shows the growth in applicants by country of citizenship for the ten fastest-growing countries of citizenship since 2020–21. Lastly, Figure 19 shows the growth in applicants by country of citizenship for the ten highest volume countries of citizenship as of 2024–25. Two trends of note: the rapid growth in applicants from Africa since at least 2020–21 has seen its first downturn this season (12% decline over the past year), and applicants from China are up for the first time since 2021–22.

⁹ We use country regional classifications per the [United Nations Statistics Division](#) methodology. Students with multiple citizenships (not including a U.S. citizenship) or who indicate being stateless are grouped into the “Other” category.

Figure 16. Growth in first-year applicants by international status since 2020–21

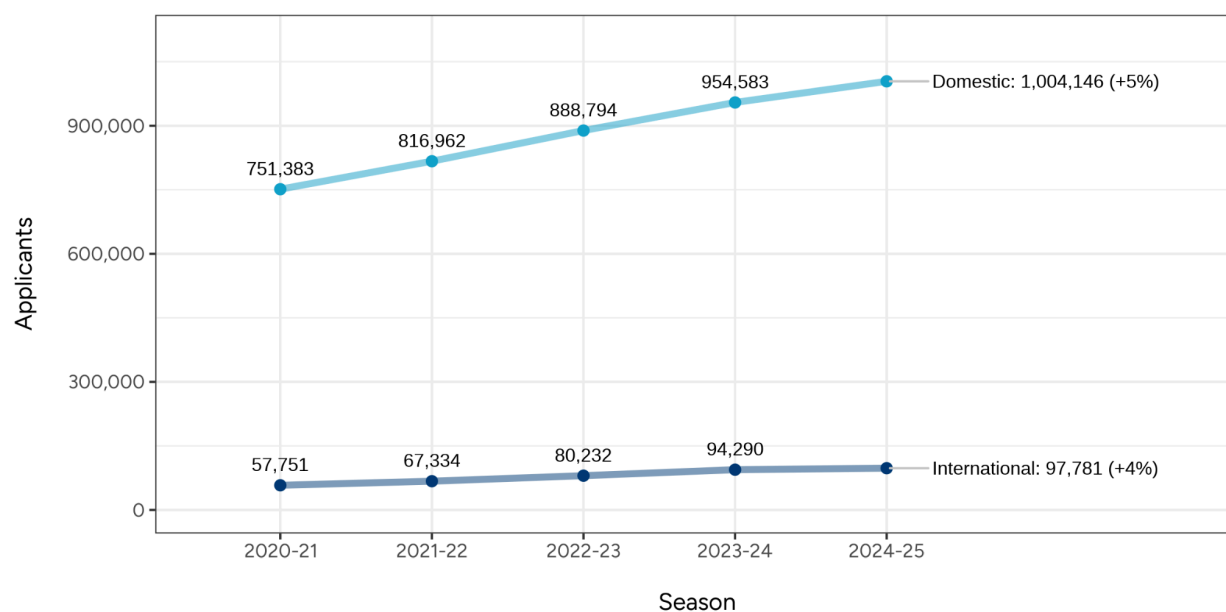

Figure 17. Growth in international first-year applicants by region of citizenship since 2020–21

Figure 18. Growth in international first-year applicants among the ten fastest growing countries of citizenship since 2020–21

Figure 19. Growth in international first-year applicants among the ten highest volume countries of citizenship as of 2024–2025

Trends in applicants' test score reporting behaviors

As reported in the past, the share of Common App members requiring standardized test scores has changed dramatically over the past decade — from about 55% in 2019–20 to an all-time low of just 4% in 2023–24. This season, 5% of members require a test score to submit an application. In Figure 20, we show that the number of applicants reporting a test score nonetheless grew faster than the number not reporting a test score at 9% growth vs. 1% since 2023–24. This reversed two seasons of faster growth in the number of applicants not reporting a test score between 2022–23 and 2023–24.

In our November deadline update, there were 46,148 more students reporting test scores than not reporting. In this update, the gap has narrowed to 9,455. We see that first-generation students, URM students, fee waiver eligible students, and students from below median income communities were more likely to apply without submitting a test score. However, the number of students reporting test scores consistently grew faster than the numbers not reporting test scores within these subgroups. Appendix Figures A6–A13 illustrate test score reporting disaggregated by first-generation status, URM status, fee waiver eligibility, and ZIP code-level income.

Figure 20. Growth in first-year applicants by test score reporting behavior since 2020–21

Trends by member characteristics

We close this report by showing how trends in applications to our domestic members have changed over time through this point in the season. Figure 21 charts the number of applications sent at this point in the season to public and private members, while Figure 22 charts the number of applications sent at this point in the season to members of varying selectivity bands (as measured by their undergraduate admit rates reported in the Integrated Postsecondary Education Data System). Public institution applications grew by 11%, while private institution applications grew by 5%. Most Selective institutions (admit rate < 25%) had the slowest application growth between 2023–24 and 2024–25 at 5%, while

applications to other institution types grew between 9% and 11% (note that members without publicly available selectivity data are omitted from Figure 22).

To better examine trends in applicants' application portfolios over time by race/ethnicity, especially as we track potential impacts of the [United States Supreme Court decision on race-conscious admissions](#) on student application behavior and college aspirations, we have also included in Appendix Figures A14 to A22 versions of Figure 22 broken out by applicant race/ethnicity groups (e.g., the number of applications Black or African American students submitted to members of varying selectivity bands). In general, we do not observe any appreciable changes from ongoing historical trends that have been in place since the 2020–21 season.¹⁰

To support members' efforts to benchmark what they observe individually against broader trends, we also provide tables of application trends by member characteristics in the Appendix (Tables B2–B5).

Figure 21. Growth in applications by member institution type since 2020–21

¹⁰ We also examined these trends in more detail in a dedicated [research brief](#) after the close of the 2023–24 season.

Figure 22. Growth in applications by member selectivity bracket since 2020–21

Figure 23 is similar to Figure 21, in that it examines applications to public and private members, but instead looks at the behavior of individual applicants. That is, it charts how many applicants at this point in the season have only applied to public members, only applied to private members, or applied to both public and private members. Importantly, because applicants will have sent relatively few applications by December 1, we see a relatively high share of applicants applying to only one or the other; by season end, we see that typically about 60% of applicants apply to both. Figure 24 similarly looks at the applicant level, but now examines applicants who apply only to members in-state, only to members out-of-state, or both.

Figure 23. Growth in applicants by public and private application behavior since 2020–21

Figure 24. Growth in applicants by in- and out-of-state application behavior since 2020–21

| Wisconsin | 20,701 | 25,878 | 27,899 | 31,480 | 31,301 | 6,713 | 7,897 | 9,538 | 10,755 | 9,278 |

Note:

Selectivity calculated as undergraduates admitted as a percent of applications

Cells with fewer than five members are omitted.

Members without available IPEDS data are omitted.

Table B5b. Application trends by member state and selectivity group (Highly and Most Selective)

| | Highly Selective (25-49%) | | | | | Most Selective (<=25%) | | | | |
|----------------|---------------------------|---------|---------|---------|---------|------------------------|---------|---------|---------|---------|
| | 2020-21 | 2021-22 | 2022-23 | 2023-24 | 2024-25 | 2020-21 | 2021-22 | 2022-23 | 2023-24 | 2024-25 |
| California | 16,739 | 18,007 | 21,390 | 21,458 | 22,960 | 61,303 | 55,027 | 68,529 | 69,158 | 71,695 |
